

TEACH TUESDAY

Enterprise AI for the Win

Facilitator Guide

Title:	Enterprise AI for the Win — Teach Tuesday Professional Development Session
Facilitator:	Jamila Gibson, Ed.S. Instructional Designer, K-5 Dual Literacy
Date:	September 30, 2025
Audience:	Instructional Design & Content Teams
Duration:	45 Minutes
Format:	Virtual / Synchronous (slides + screen share demo)
AI Tool:	Enterprise AI Assistant

Create. Iterate. Elevate.

A framework for building AI-assisted workflows that amplify your expertise, reduce time on low-value tasks, and make space for the work that matters most.

Session Overview

01 Intro + Icebreakers	02 Data Analysis	03 Quick Ref. Guides	04 Spread- sheets	05 Quality Assurance	06 Outro + Call to Action
-------------------------------------	-------------------------------	-----------------------------------	--------------------------------	-----------------------------------	--

Learning Objectives

By the end of this session, participants will be able to:

- Apply at least one Enterprise AI prompt pattern to a real workflow task (Data Analysis, Quick Reference Guides, Spreadsheets, or Quality Assurance) within one week of the session. (Apply — Bloom's Level 3)
- Construct targeted Enterprise AI prompts that include role context, task parameters, and output format to produce useful, job-relevant artifacts. (Create — Bloom's Level 6)
- Evaluate how AI-assisted workflows can reduce time spent on low-value tasks, using personal pain points and skill strengths identified during the session as evidence. (Evaluate — Bloom's Level 5)

Materials Needed

Presenter

- Teach Tuesday: Enterprise AI for the Win slide deck (shared screen)
- Enterprise AI access
- Artifact examples open and ready: Operations Review, Sprint Retrospective, CAD Dual Lit Walkthrough QRG, Acacia's Building Biliteracy Workshop QRG, GK Content Analysis tracker, POC Errata Cleanup
- Backup screenshots of artifacts (in case of screen share issues)

Participants

- Enterprise AI access (or guest view)
- Notebook or digital doc for prompt experiments
- Zoom or Teams with chat enabled

Technical Setup

- Enable participant chat for icebreaker responses
- Test screen share with artifact files before session
- Confirm slide deck chapter labels match artifact links

Timing Breakdown

Segment	Time	Facilitator Action	Notes
0:00–2:00	2 min	Welcome & framing Introduce yourself; share the session tagline: Do the Work. Make the Work Better.	Slides: Cover + TOC Camera on encouraged
2:00–8:00	6 min	Icebreakers (3 questions) Q1: What are you grateful for today? Q2: What hidden skills/talents do you bring to work? Q3: What is a regular pain point in your work? Invite chat responses; call on 2–3 people per question.	Slides: Ch. 01B–01D Prime learners to connect pain points to AI use cases
8:00–18:00	10 min	Use Case #1: Data Analysis Share example prompts. Walk through Operations Review artifact. Walk through Sprint Retrospective artifact. Debrief: How did Enterprise AI change the prep time?	Slide: Ch. 02A Live demo or screen share preferred
18:00–28:00	10 min	Use Case #2: Quick Reference Guides Share example prompts. Walk through CAD Dual Lit Walkthrough QRG. Walk through Acacia's Building Biliteracy Workshop QRG. Discuss transcript-to-guide workflow.	Slide: Ch. 03A Highlight the 2-step prompting pattern: notes first, then QRG
28:00–38:00	10 min	Use Case #3: Spreadsheets & Use Case #4: Quality Assurance Use Case 3: Share prompts; show GK Content Analysis tracker and template examples. Use Case 4: Show QA prompts; walk through POC Errata Cleanup artifact.	Slides: Ch. 04A, Ch. 05A Pace is brisk here; encourage Q&A in chat
38:00–43:00	5 min	Bringing It Full Circle Connect icebreaker pain points back to use cases. Key message: pairing your unique strengths with AI means more time for joy-driven work.	Slides: Ch. 06A–06B Call back to specific answers shared during icebreakers if possible
43:00–45:00	2 min	Call to Action + Close (1) Try one new AI prompt this week. (2) Swap examples with a colleague. Thank participants. Share resource links if applicable.	Slide: Ch. 06C Leave 30 sec for any final chat questions

Facilitation Notes by Use Case

Use Case #1: Data Analysis (Slides Ch. 02–02A)

Context

This use case demonstrates how Enterprise AI accelerates sprint metrics prep. Jamila used Enterprise AI to analyze Jira data and generate narrative insights for operations reviews and retrospectives — work that previously required significant manual synthesis.

Example Prompts (display on slide)

- "Compare Jira metrics across the last 3 sprints. What patterns do you see in velocity, cycle time, and variance?"
- "Please take the following metrics and provide insights for completion ratio, ready backlog, velocity, and velocity variance that I can share during our sprint retrospective."

Suggested Discussion Questions

- What data do you regularly pull together manually that might benefit from AI synthesis?
- How do you currently handle sprint retrospectives or operations reviews — and where does the prep time go?
- What concerns do you have about using AI to summarize data before sharing it with leadership?

Facilitation Tips

- Walk through one artifact live if possible — show the raw prompt input vs. the structured output.
- Acknowledge that Enterprise AI output requires human review; position it as a first draft accelerator, not a final product.
- If time allows, invite 1–2 participants to share their own data-heavy pain points.

Use Case #2: Quick Reference Guides (Slides Ch. 03–03A)

Context

This use case highlights a two-step prompting workflow: (1) extract and organize workshop notes, then (2) transform those notes into a structured QRG. Especially powerful after walkthroughs, trainings, and onboarding sessions.

Example Prompts (display on slide)

- "Take the following Dual Lit PDF markup walkthrough workshop transcript and create notes with a section for tips, step-by-step process, resources, and things that are still unclear."
- "Convert these workshop notes into a step-by-step quick reference guide. Include purpose, key steps, action items, pro tips, and common mistakes to avoid."

Suggested Discussion Questions

- When was the last time you sat through a workshop or training and wished you had a cleaner reference document afterward?
- What sections would be most useful for your team in a QRG — steps, tips, or things to avoid?
- How does the two-step prompting approach (notes first, then guide) change how you think about using AI?

Facilitation Tips

- Emphasize the two-step pattern explicitly — it is replicable across any transcript or meeting recording.
- Point out the structured output sections (purpose, steps, tips, common mistakes) and how they map to instructional design principles.
- Connect this use case to bilingual/dual language team needs if your audience includes Dual Literacy team members.

Use Case #3: Spreadsheets (Slides Ch. 04–04A)

Context

This use case covers two flavors: (1) using Enterprise AI to restructure raw data into a logical project tracker, and (2) using ChatGPT to auto-generate Excel formulas with explanations. Together they show how AI can handle both structure and calculation logic.

Example Prompts (display on slide)

- "Enterprise AI — Structure the following data into a project tracker for Excel with columns, rows, and categories to be more efficient and communicative of the data we are gathering/tracking."
- "ChatGPT: Create an Excel sheet that automatically calculates totals, averages, and percent completion for [type of data]. Provide formula explanations."

Suggested Discussion Questions

- What spreadsheets do you maintain regularly that take significant time to build or update?
- Have you ever asked AI to help with a formula? What was the result?
- What would you track differently if setting up a spreadsheet only took 10 minutes?

Facilitation Tips

- Note that Enterprise AI and ChatGPT both appear here — normalize using multiple AI tools for different strengths.
- Show the GK Content Analysis artifact and walk through what the before-state likely looked like.
- If your audience is non-technical, de-emphasize formula syntax and focus on the time-saving potential.

Use Case #4: Quality Assurance (Slides Ch. 05–05A)

Context

This use case applies Enterprise AI to content review and error correction — particularly for Spanish-language curriculum. It also demonstrates how AI can synthesize author/vendor feedback into a clear action list, reducing cognitive load during revision cycles.

Example Prompts (display on slide)

- "Proofread this Spanish passage for grammar, spelling, diacritical marks, and punctuation errors. Provide corrections with explanations."
- "Summarize author/vendor feedback from round 1 review into an action list for curriculum revisions."

Suggested Discussion Questions

- How much time does your team spend on manual proofreading or QA passes each sprint?
- What types of errors are hardest to catch consistently — and could AI help flag those first?

- What safeguards would you want in place before trusting AI QA on student-facing content?

Facilitation Tips

- Walk through the POC Errata Cleanup artifact and highlight how the corrections include explanations — not just fixes.
- Acknowledge the importance of human review, especially for Spanish-language accuracy in bilingual curriculum.
- This is a strong use case for team members who review vendor or author content regularly — call that connection out explicitly.

Debrief & Call to Action Script

Bringing It Full Circle (Slides Ch. 06A–06C)

Use the script below as a guide. Adapt language to match your natural speaking style. Estimated time: 7 minutes.

TRANSITION TO DEBRIEF:

[Say to the group]

"At the start of our session, I asked you three questions: what you're grateful for, what hidden skills you bring to work, and what pain points you experience regularly."

"I asked those questions intentionally, because what I've found — in my own practice — is that the most impactful AI use cases aren't random. They come from the intersection of what you're already good at and what currently drains your energy."

CONNECT BACK TO ICEBREAKERS:

[Call back to specific chat responses from the icebreakers if possible. Examples below:]

- "Someone mentioned [X pain point] earlier — that's exactly the kind of task where a prompt like the ones we saw in Use Case #2 could save an hour of your week."
- "And [X skill] that someone mentioned? That's the judgment layer that makes your AI output actually useful. Enterprise AI can generate a draft — but it takes your expertise to know if it's right."

KEY MESSAGE:

"Pairing AI with your unique strengths isn't about replacing the work you do. It's about reclaiming your time — so you can spend more of it on the parts of the work that actually bring you joy."

"Pain points aren't just frustrations. They're signals. They tell you where AI can have the most impact for you, specifically."

CALL TO ACTION:

[Advance to final slide Ch. 06C]

"Before we close, here's what I'm asking you to do this week:"

1. Try one new AI prompt in your workflow — just one. Use one of the examples from today as a starting point, or adapt it to something on your to-do list right now.
2. Swap examples with a colleague — find out what they're doing, share what you tried. That cross-pollination is how we get better faster.

CLOSE:

"That's all, friends. Thank you for your time and your energy today. The work we do matters — and so does how we do it. Keep doing the work. Keep making it better."

Quick Reference: Prompt Patterns by Use Case

Use Case	Starter Prompt Pattern	Output Type
Data Analysis	"Compare [data source] across [time period]. Identify patterns in [metric 1], [metric 2], and [metric 3]."	Narrative insights / bullet summaries
QRG — Step 1	"Take the following [transcript/notes] and create organized notes with sections for tips, step-by-step process, resources, and open questions."	Structured notes doc
QRG — Step 2	"Convert these notes into a step-by-step quick reference guide. Include purpose, key steps, action items, pro tips, and common mistakes to avoid."	QRG / job aid
Spreadsheets	"Structure the following data into a project tracker for Excel with columns, rows, and categories for [tracking goal]."	Excel-ready table structure
Formulas	"Create an Excel formula that calculates [metric] for [data range]. Provide formula explanation."	Formula + explanation
QA — Proofread	"Proofread this [Spanish/English] passage for grammar, spelling, [diacritical marks,] and punctuation. Provide corrections with explanations."	Annotated correction list
QA — Feedback Synthesis	"Summarize [author/vendor] feedback from [round X] review into a prioritized action list for curriculum revisions."	Revision action list
